

e-paper bulletin board operators manual

EBB is a Slow Web device

EBB is not intended to be fast. You must exercise tremendous patience while operating EBB.

photos posted publicly are live on Scuttlebutt (see www.scuttlebutt.nz for more info) and could get gossiped (seen) by people outside our group. Once photos are on Scuttlebutt they cannot be removed.

ze device

on the left side of the device there are buttons labelled ABCDE. We refer to them as buttons 1-5. There is also an LED near these buttons that indicates the status of EBB. When is LED is a SOLID color it means you need to wait for EBB. When the LED is flashing it means EBB is waiting for YOU.

booting

when you first plug in EBB the LED will light up purple indicating EBB is starting up. Once booted, every hour or so (maybe less) EBB automatically cycles between images.

sync

every few hours EBB automatically gets new pictures from your friends. Photos older than a few weeks are deleted automatically unless you favorite them (see below).

taking photos

press button 1 to take a photo. When the red LED on the camera goes out, the photo is taken. Then your photo will be displayed and the LED will flip between green/yellow/red. You now have 4 choices:

- press button 1 to post the photo online
- press button 2 to save the photo on this EBB only
- press button 3 to re-take the photo
- press button 4 to exit photo mode.

other features

button 2: advance to the next photo.

button 3: this feature may or may not currently work, but, you're supposed to get a menu:

- press button 1 to power down EBB (it is best to always use this method to power-down EBB)
- press button 2 to display your EBB's friend code or add a friend via QR
- press button 3 to update the EBB program to the latest version
- press button 4 to print the current photo at the print shop
- press button 5 to exit this menu

button 4: instructions will display on the screen on how to delete or favorite the current photo.

button 5: display the weather. Probably doesn't work rn.
